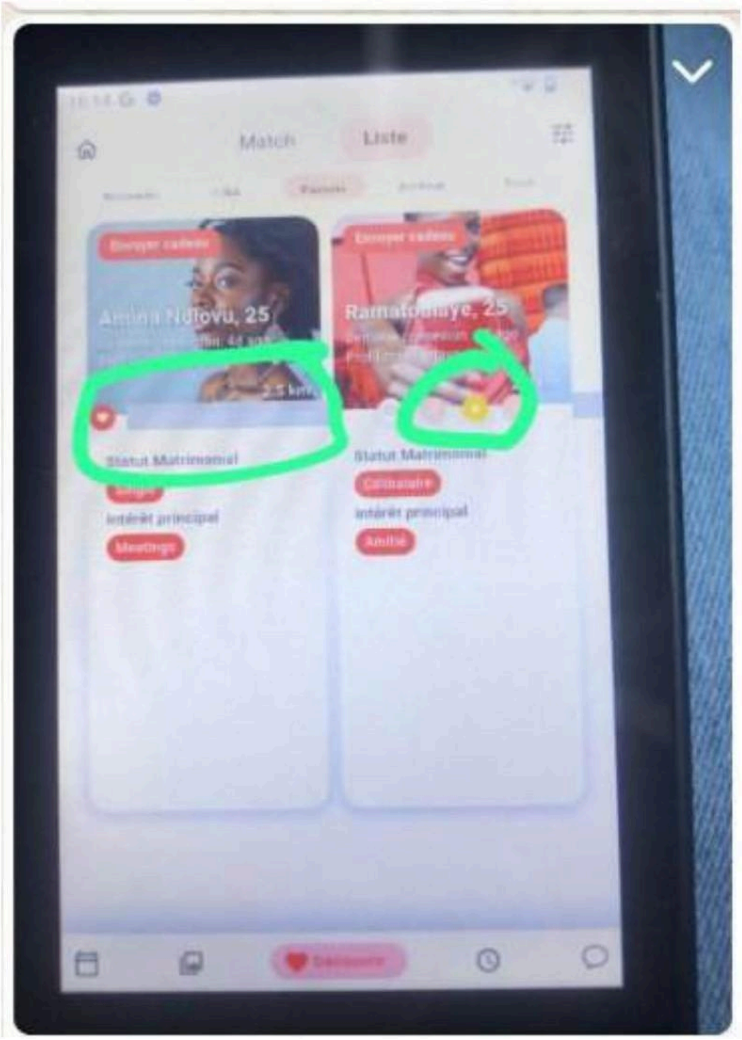
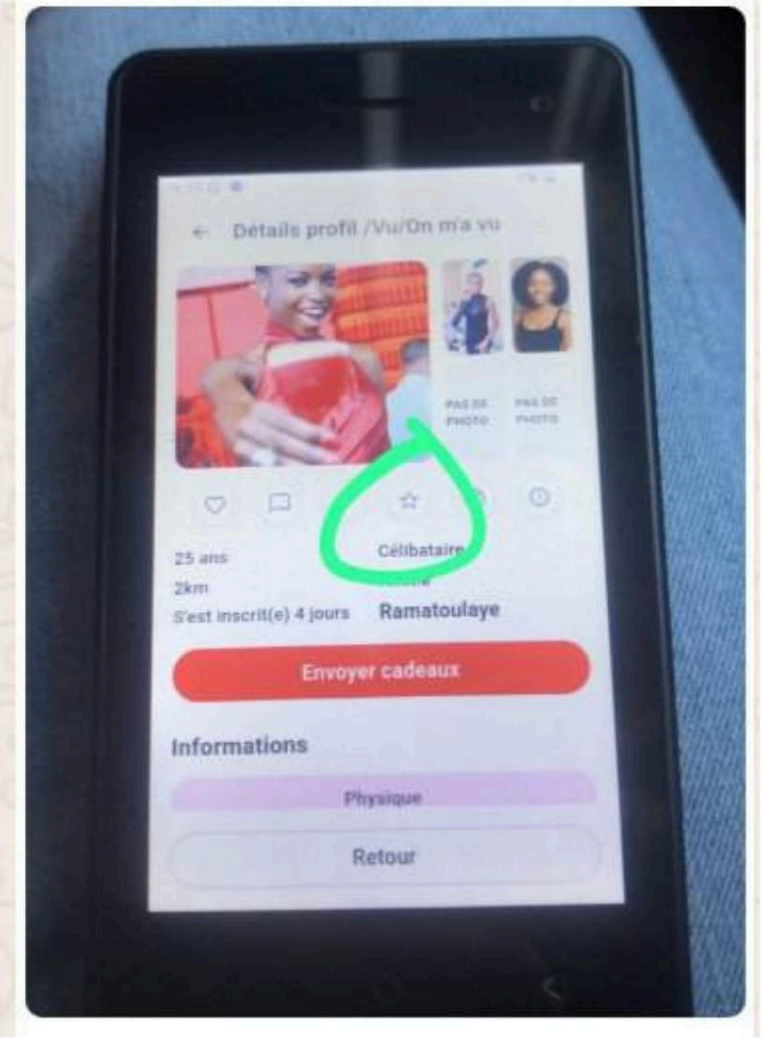
- [ ] There is a loop. It seems that users can’t log in since the last update.
- [x] ~~The current version is a pain for testing; there's no connection, it sends a new link every time, etc. (no link needed for testing: created debug_main.dart file for testing)~~
- [x] ~~The messaging system (message button) is not working since Match.[working]~~
- [ ] This opens the messaging section with the button bar hidden at the bottom.
- [ ] In the match settings, if I like it, it should move to the next profile (like an archive).
- [ ] First, we will disable the sliding functions, which complicate the tests.
- [x] ~~In the list, "all" doesn't seem to work (it should display all profiles). [doing - also refactored the UI so that it caches all the list locally and will filter the local list and show it to the user, so it is very fast in comparision to the old implementation.] Now this is working.~~

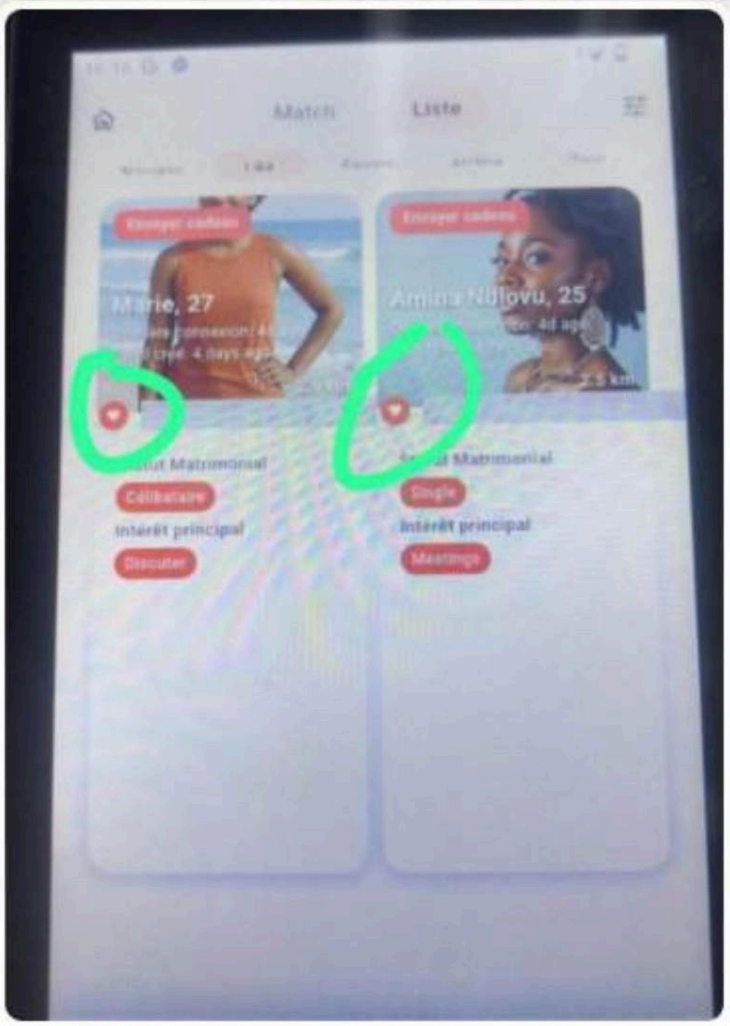


- [x] ~~There seems to be a display problem in favorites [solved temporarily using firebase db~~

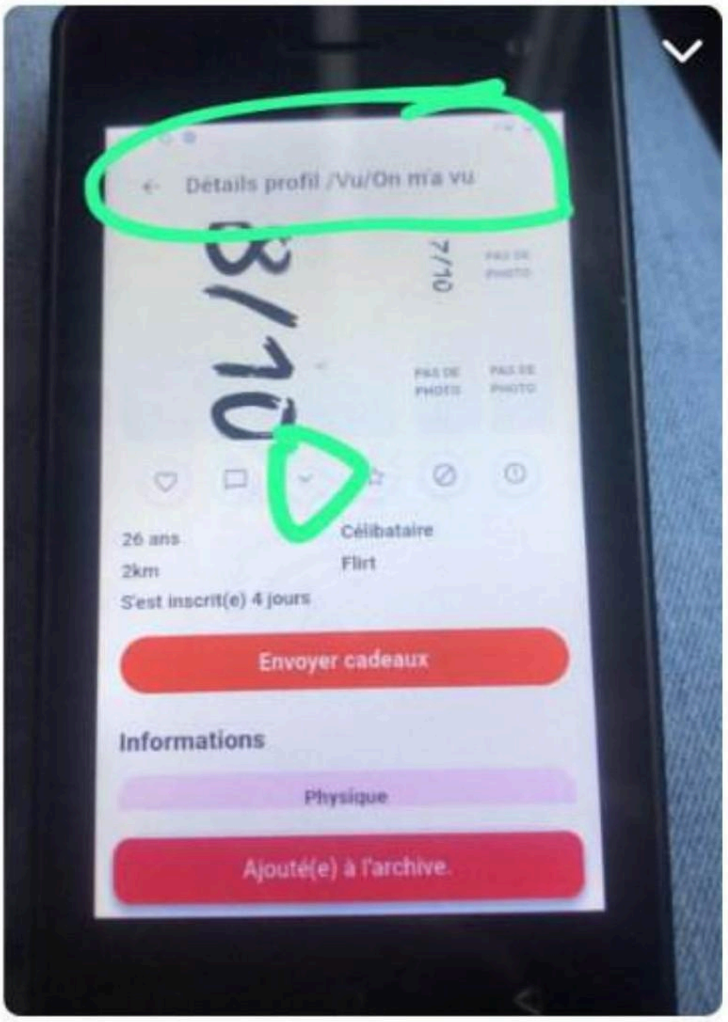
~~editing]~~



- [x] ~~The profile details do not display the activated (favorite) buttons; the profile cannot be removed from favorites. (**done**). [It is slow but will display it]~~

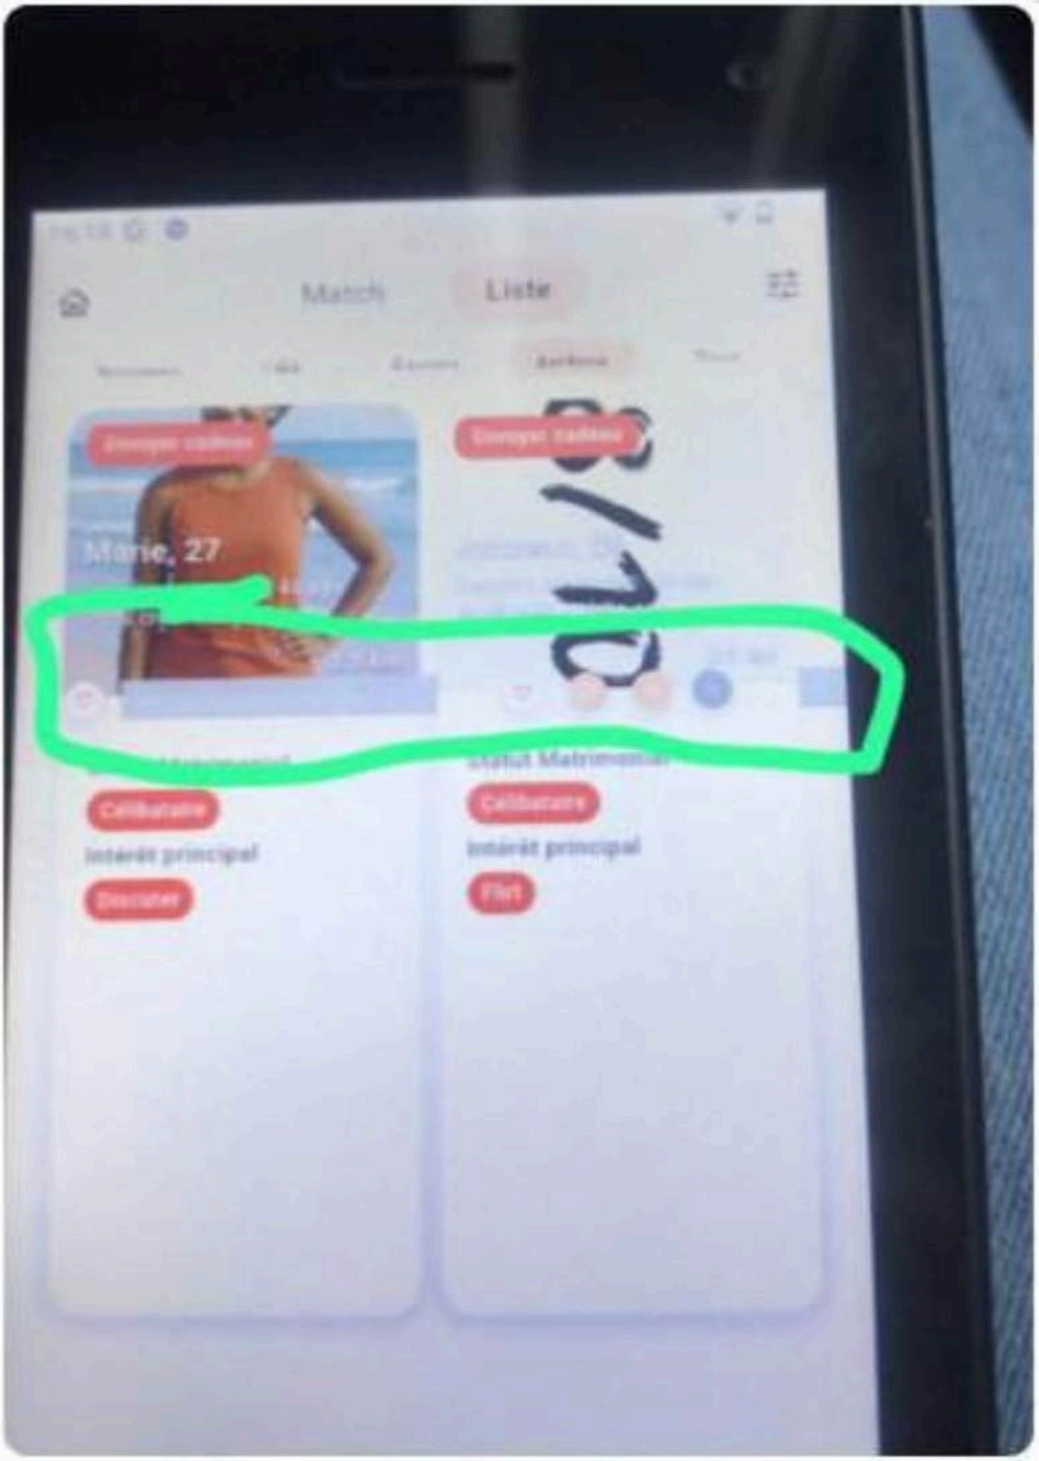


- [x] ~~The buttons don't seem to work on the thumbnail; you have to go into the profile details. [I think this is working - please check]~~

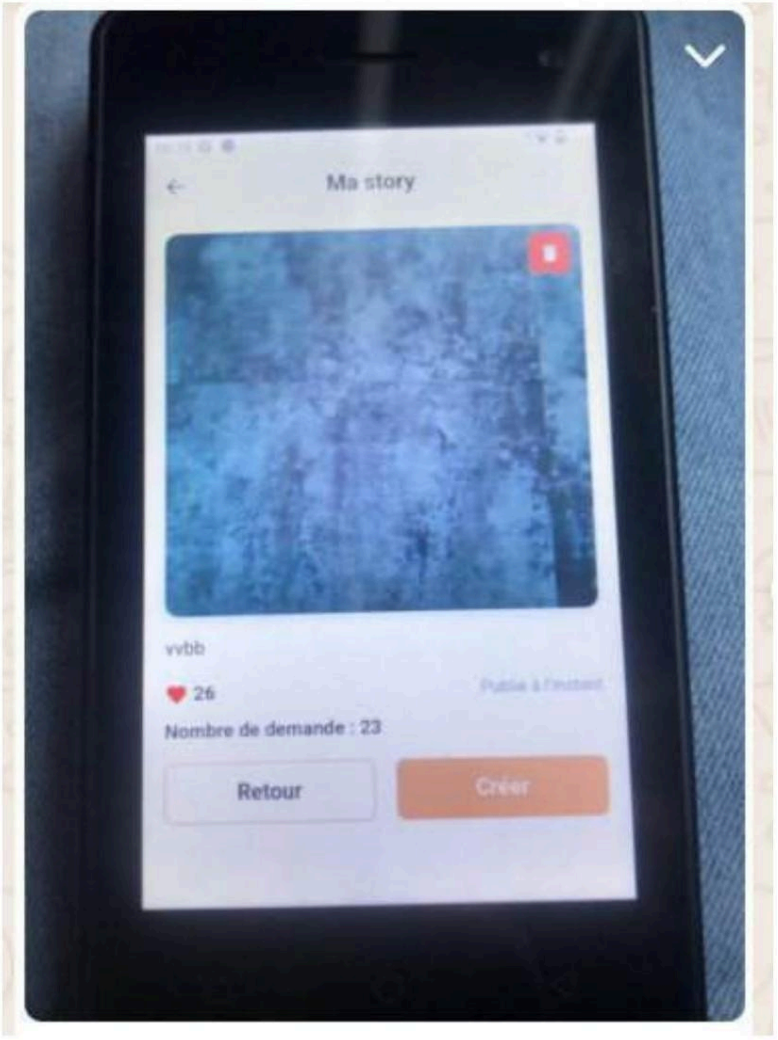


☐ The profile details from the archive show this ,

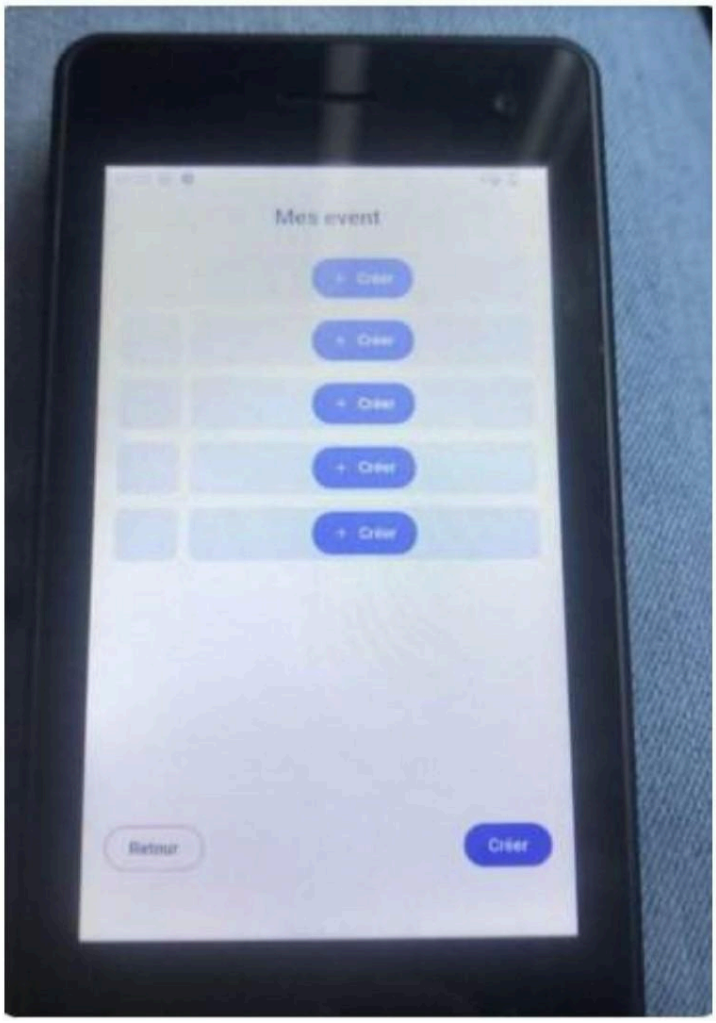
☐ We are unable to retrieve the profile from the archive.



- [x] ~~Minor display bug (doing) [this bug is related to the firebase status] [done temporary solution, changed the db collection 'chats' all docs to isRejected: true, status: "REJECTED"~~



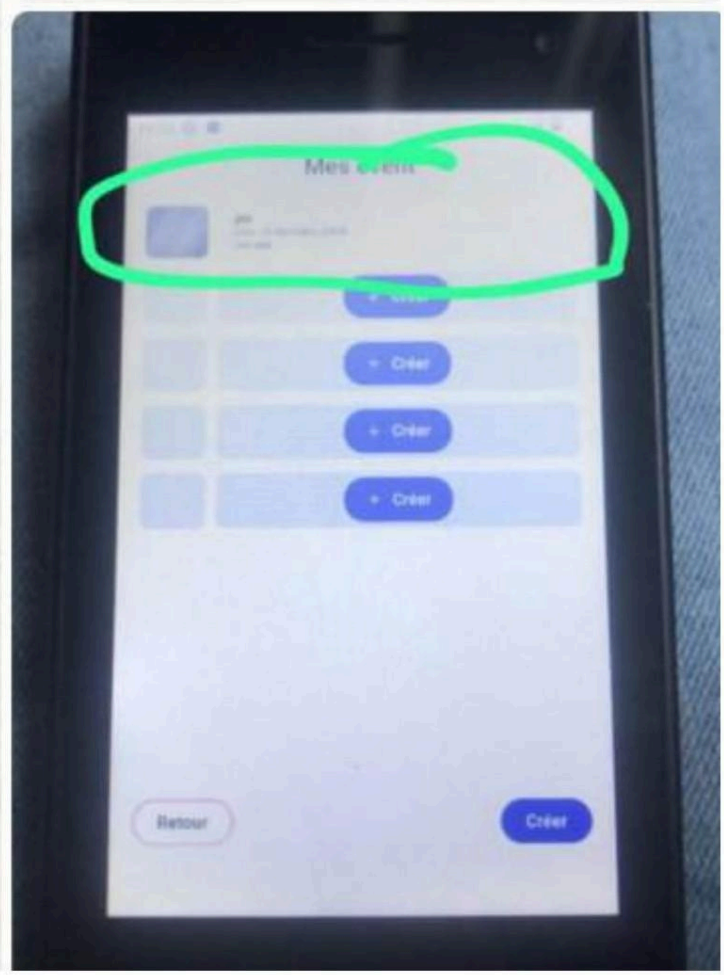
☐ My story isn't displaying the list of 5 story locations.



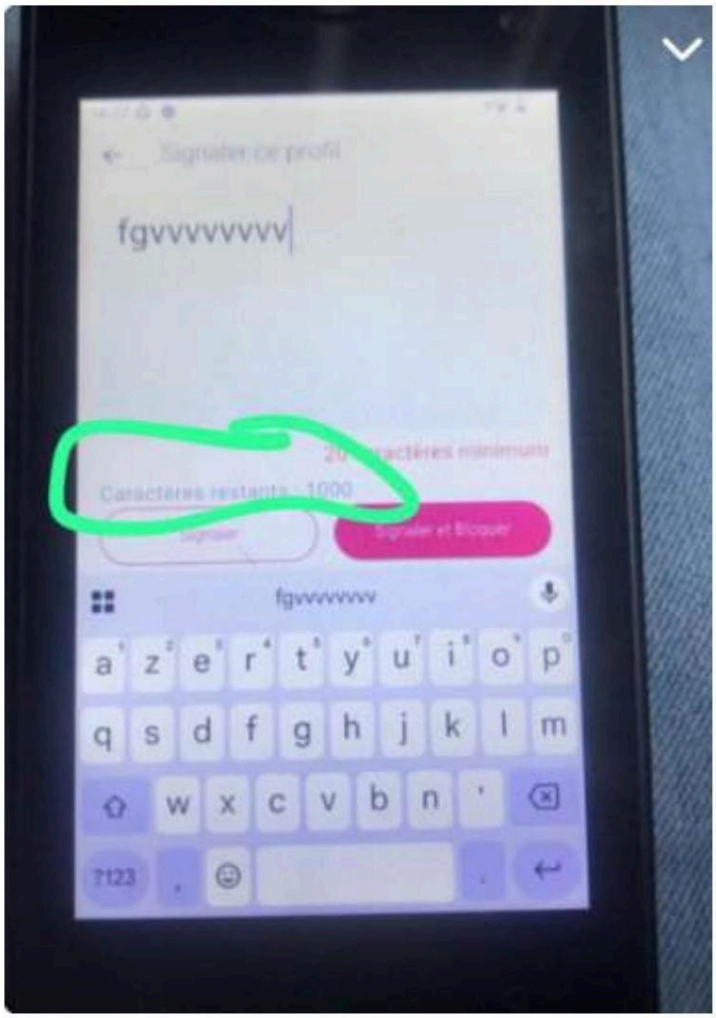
- [ ] However, it works well in events.
- [ ] In the story, the "all" button doesn't seem to work.
- [ ] The report and message button is no longer working.

- [ ] Viewing profile details from within a story doesn't seem to work, nor does accessing story details.

- [ ] In the events section, if I create an event, I can see and participate in it; my own events should
- [ ] not be visible to me in the events section. ,



- [ ] It seems I can't access my event (from my events).

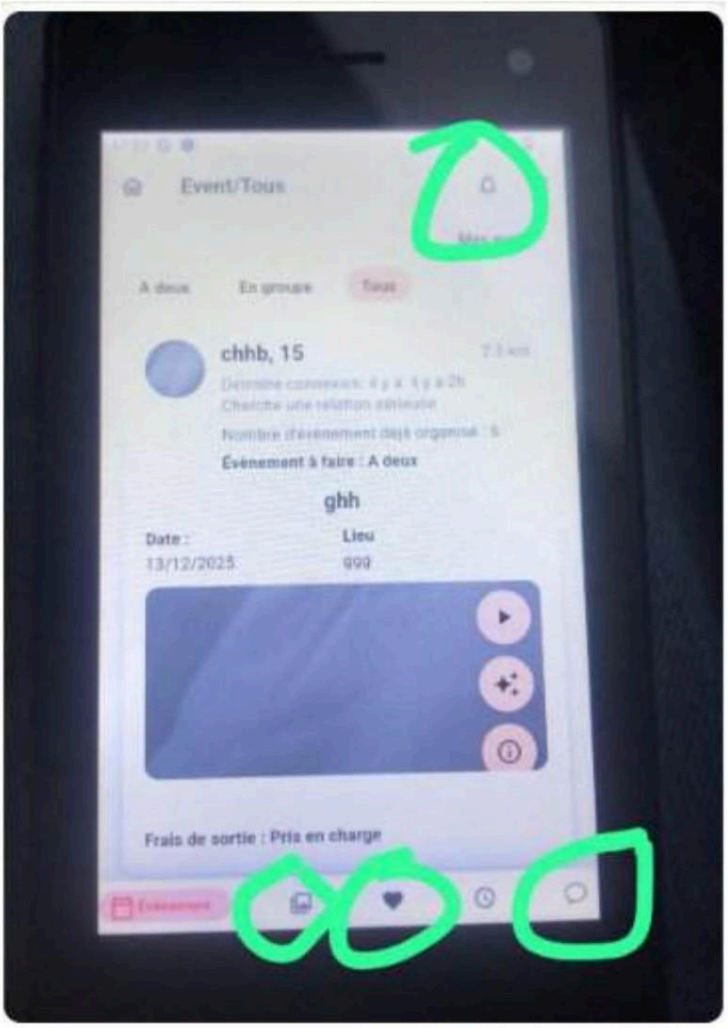


- [ ] The character counter(s) do not appear to be working.

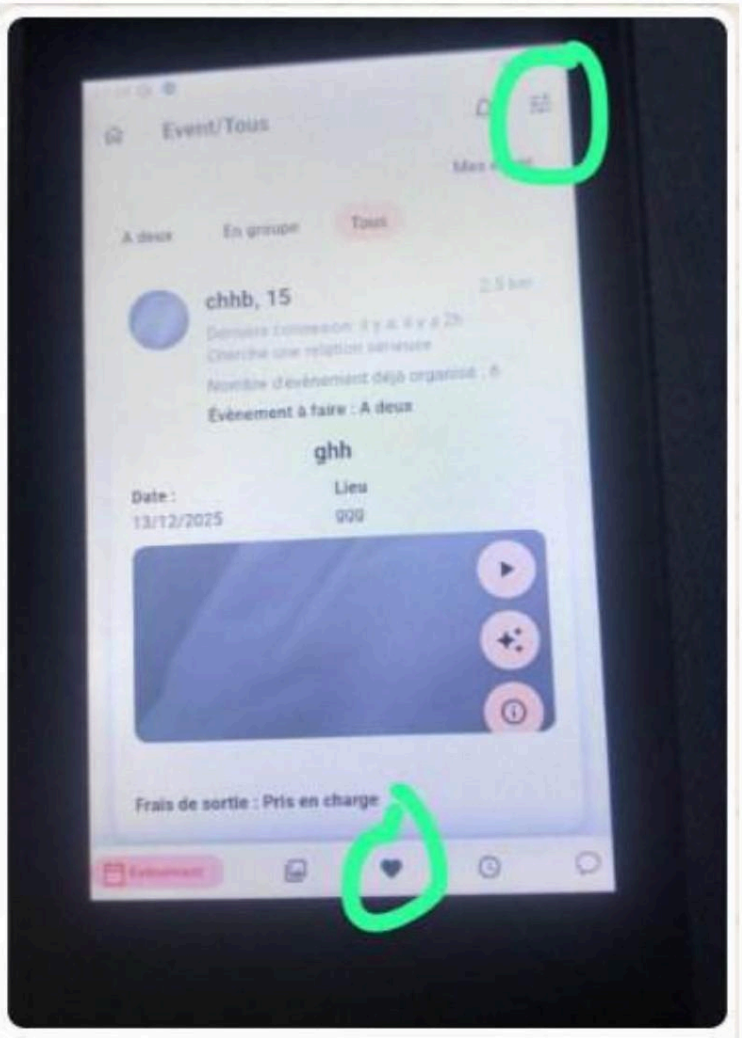
- [ ] Here is an initial list of bugs.

- [ ] Is it sufficient to report them to you this way, or would you prefer a video/screenshot for each bug listed?

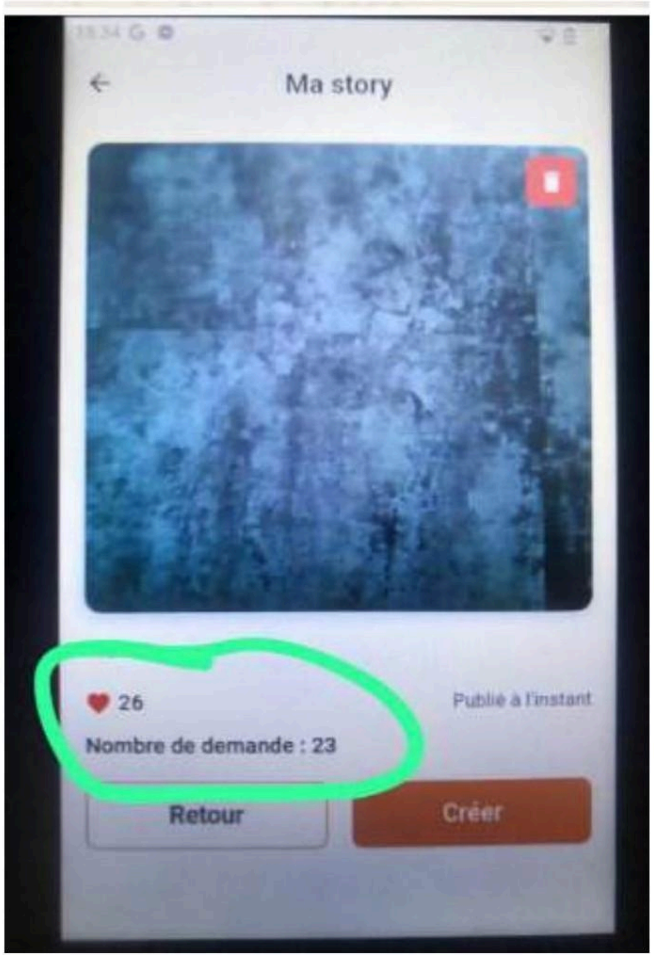
- [ ] Do you want me to go further right now (in activity and messaging for example) or is it preferable to fix these bugs first and move forward gradually?



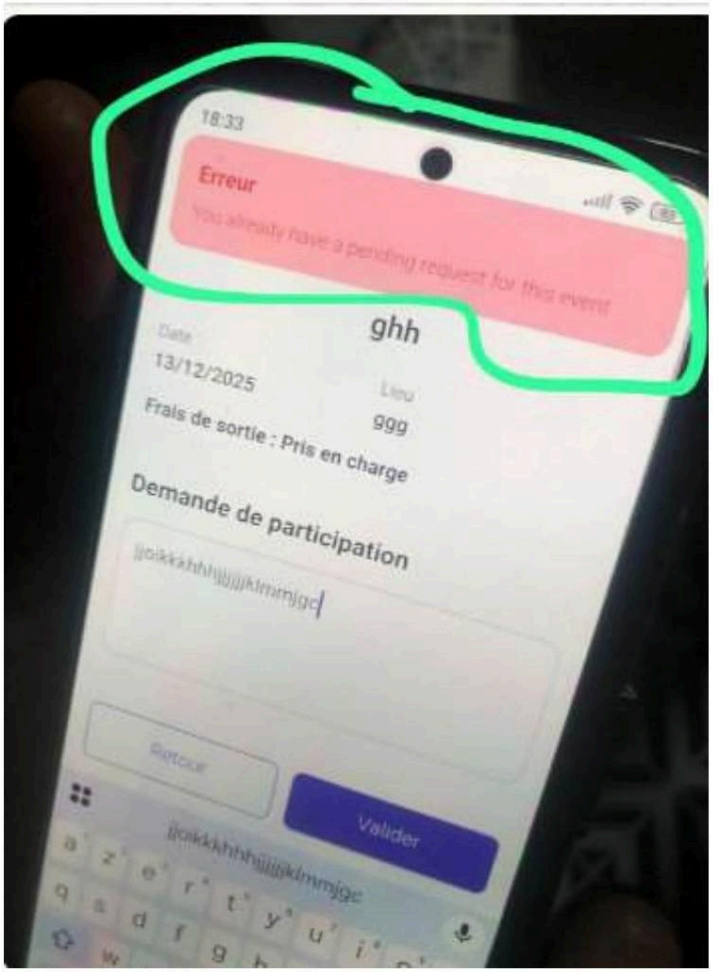
- [ ] The notification button does not appear in the story, dating, and messaging sections. It doesn't seem to work in the activities and events sections.



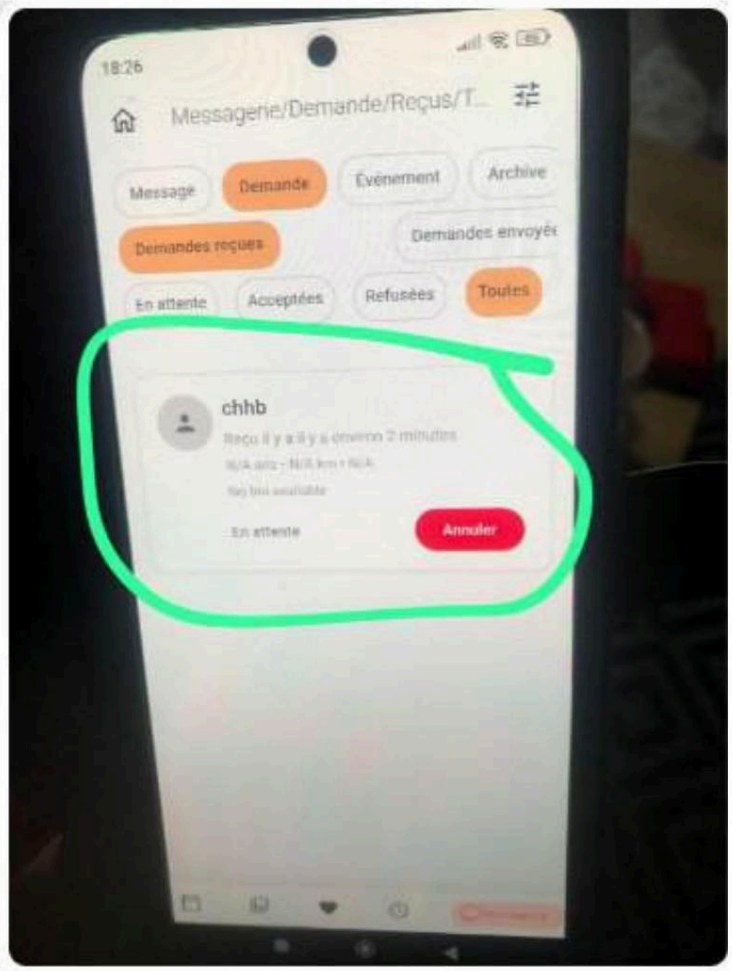
☐ The filter button only seems to work in encounters.



- [ ] In the details of my story, these indicators are not working.



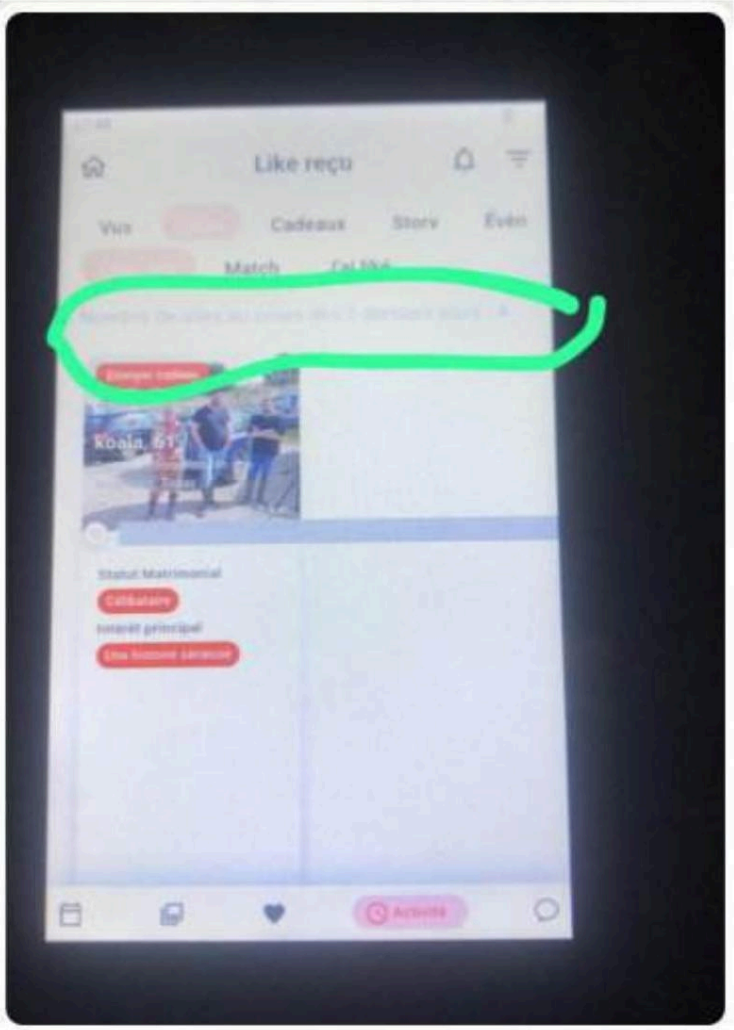
☐ I don't know what that corresponds to



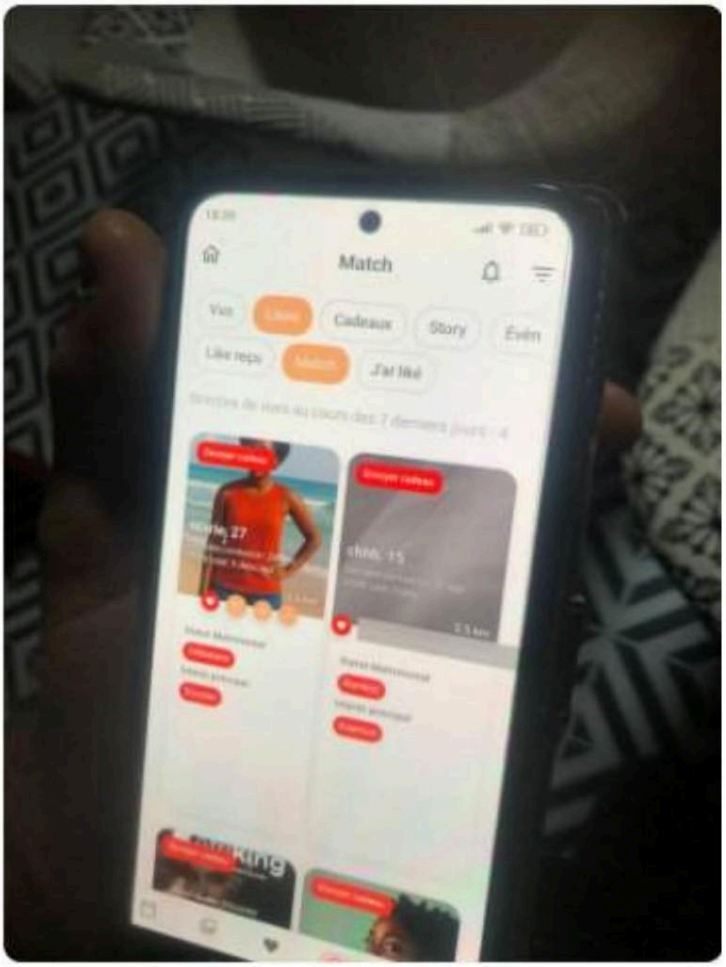
- [ ] Received requests must have an "Accept" and "Reject" button; this presentation is that of a sent request.

- [ ] We should be able to open the details of a message request or a participation request, but it doesn't seem to be working.

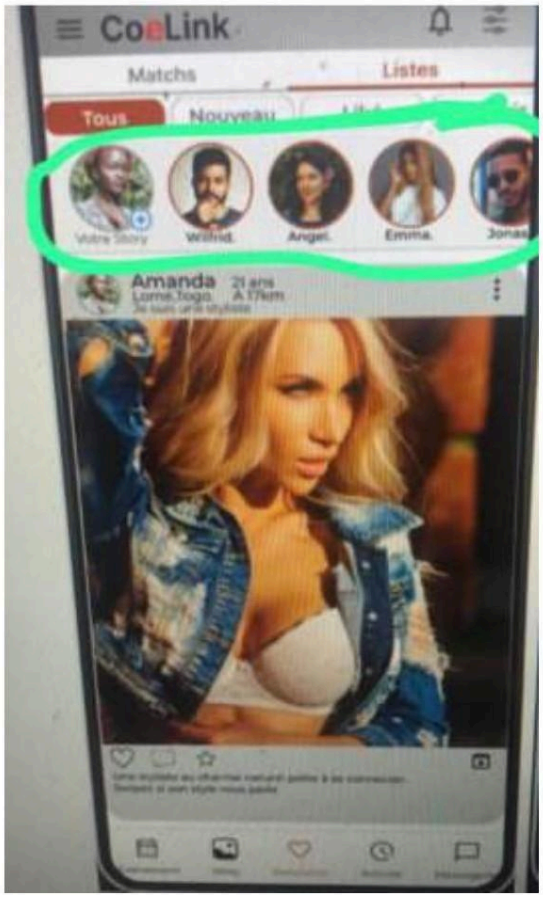
- [ ] An accepted request should create a discussion in the messaging system.



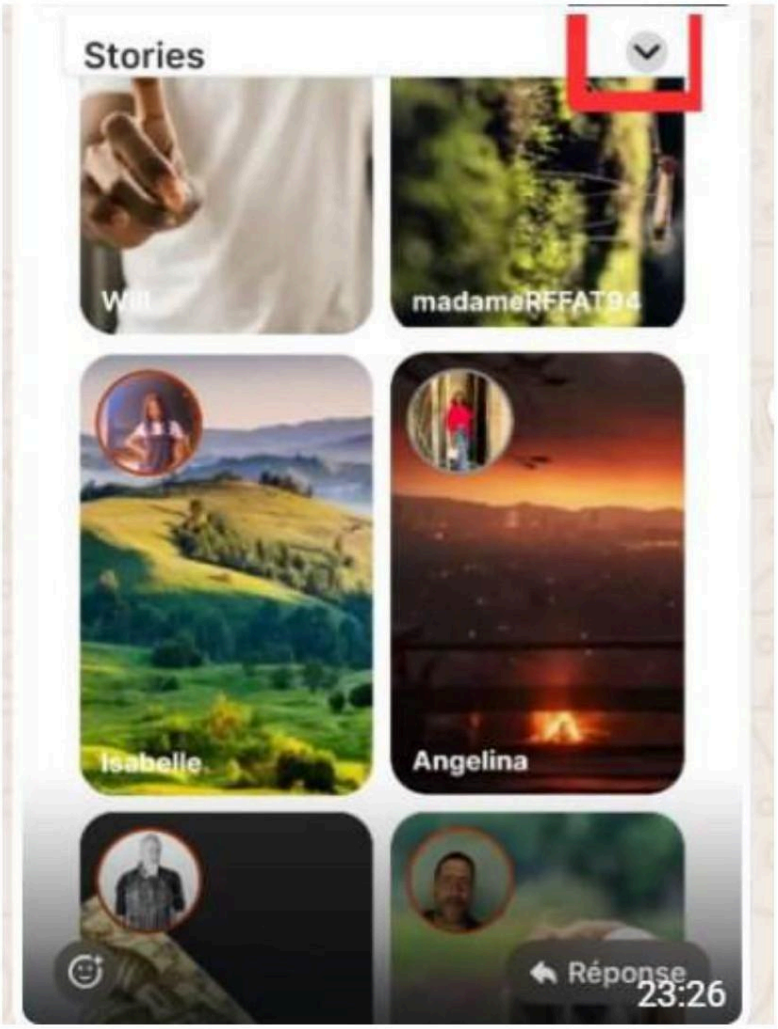
- [ ] Everywhere, this indicator seems not to work.



☐ The match should only show profiles that I have liked and that have liked me.

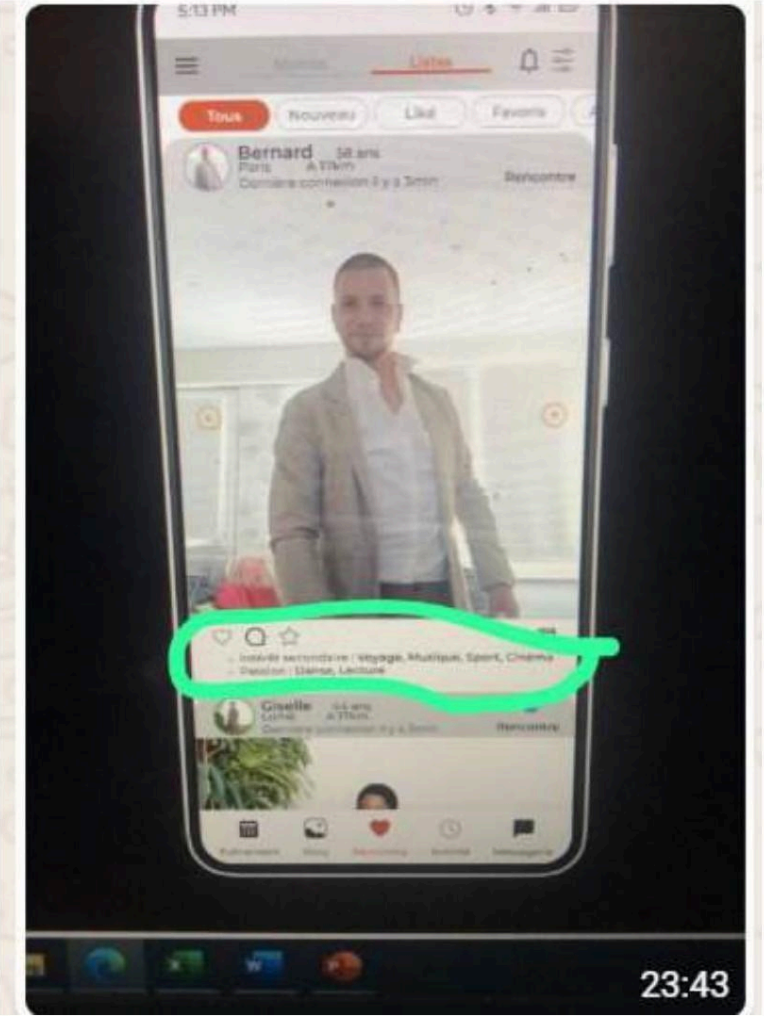


- [ ] I'm thinking about using stories and events, perhaps with a list format, and maybe displaying the stories as mini-images on the meet/list page. []

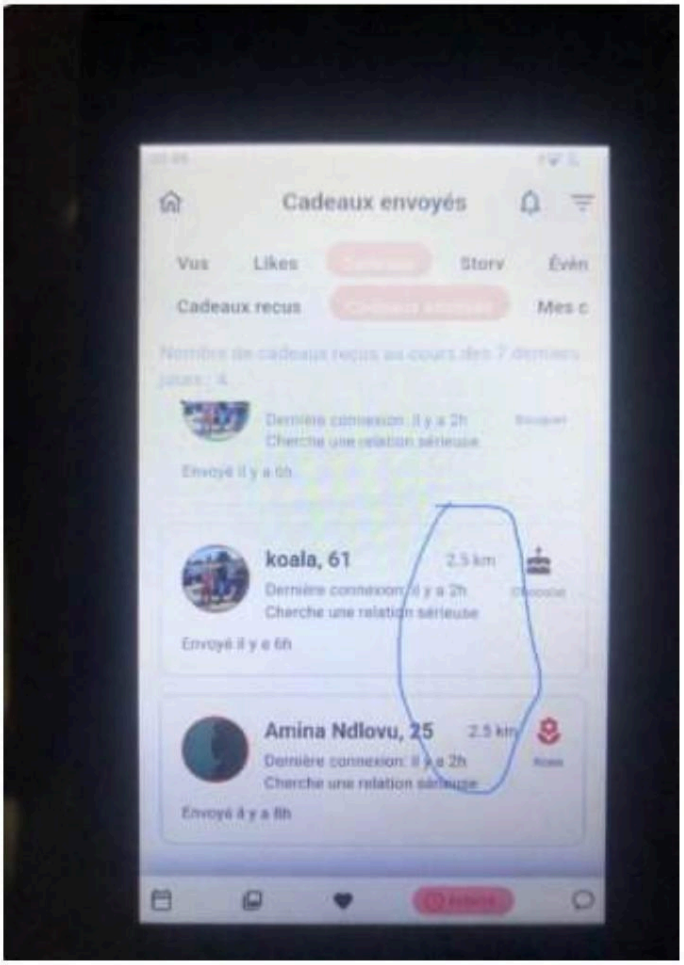


- [ ] For the next section, you need to consult the PowerPoint presentation on account creation and profile details, as well as the information visible on the profile thumbnails.

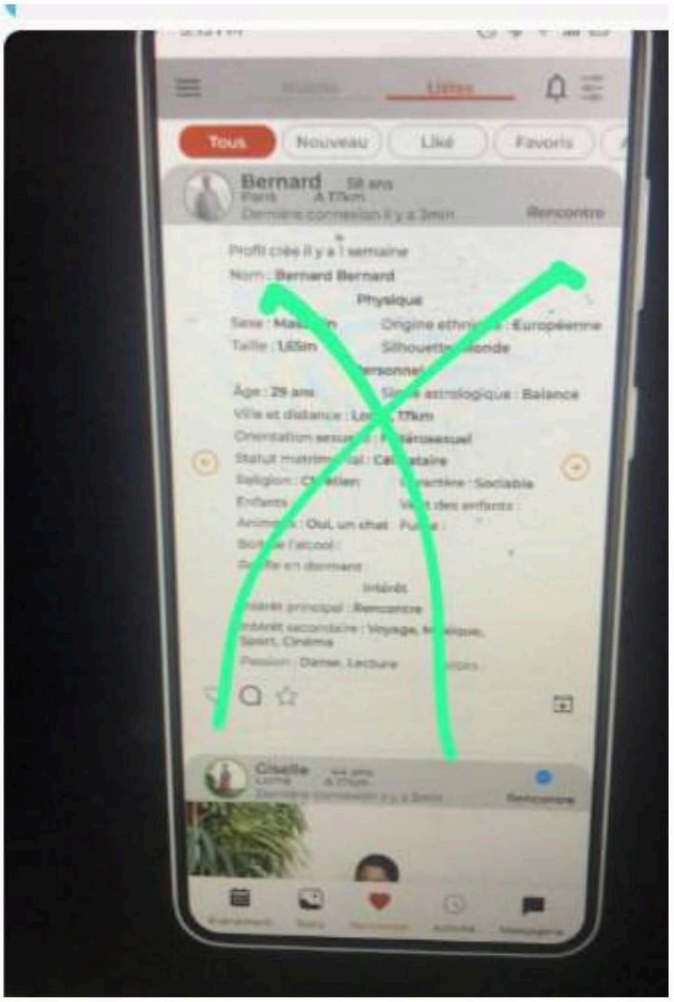
- [ ] The information displayed on the thumbnails changes as you scroll through the photos.



☐ Design 1 demonstrates this function

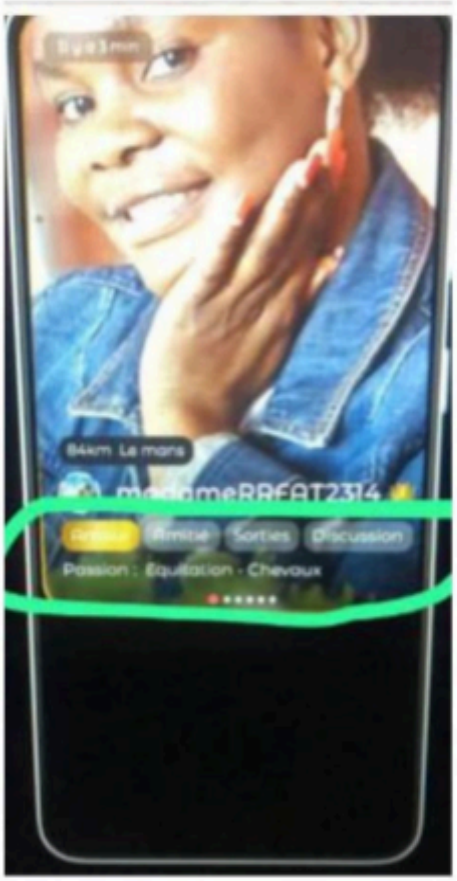


- [ ] The distance indicator for me doesn't seem to be working

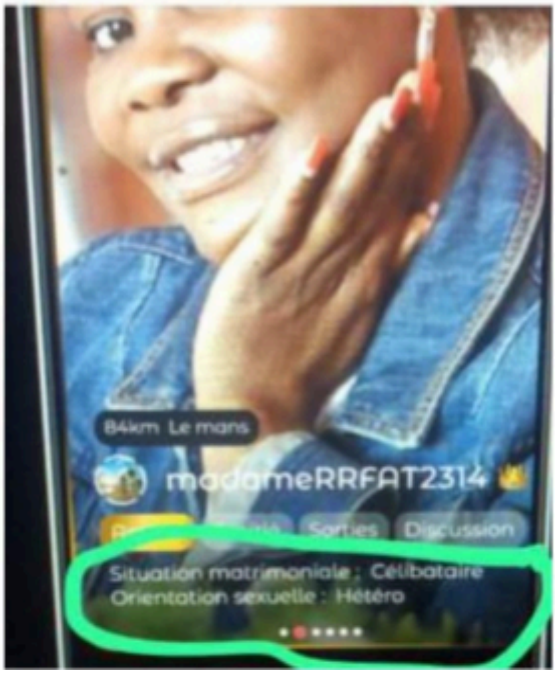


- [ ] Ignore the profile details shown in the photos; they won't be in the final design.

- [ ] Design 1



Another example of how this works



☐ If you can plan for it now, that's perfect; that will be how the final design works.

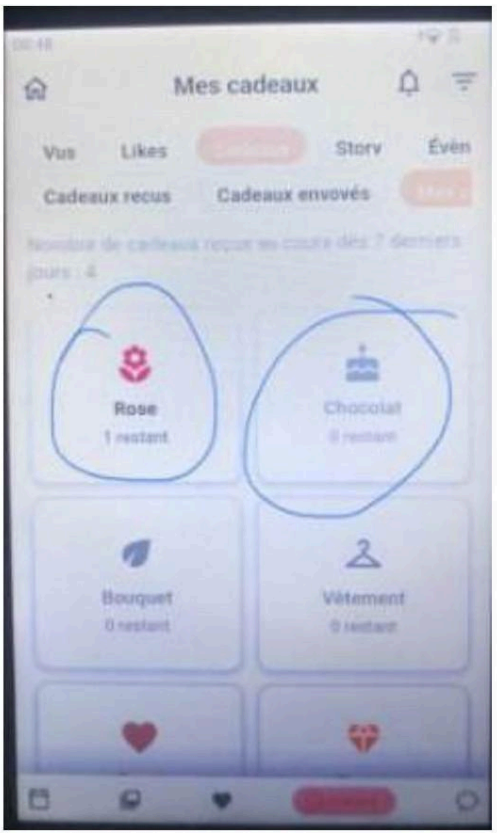
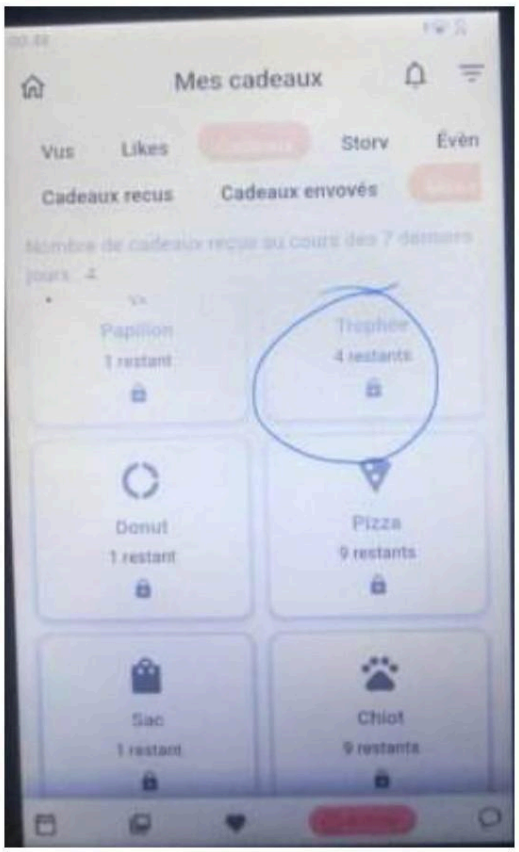
Another example

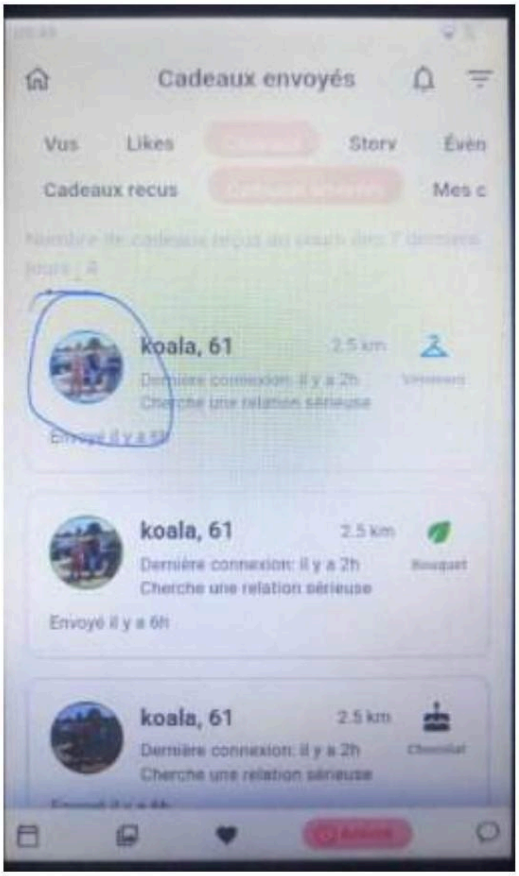
- [ ] The basic information (in bold in the document) remains visible on each photo, but the other information (2 pieces per photo) changes on each photo.



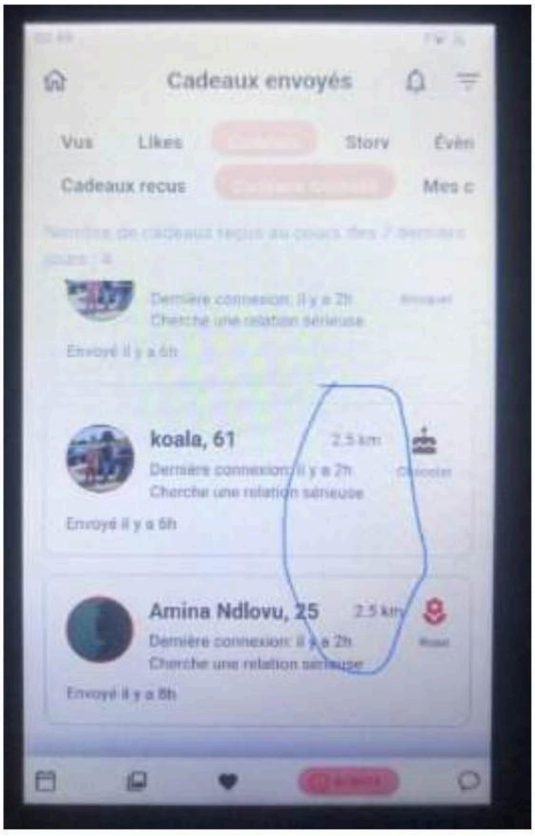
- [ ] When you click on the gifts, it should display an information message with the time before the gift needs to be recharged (like on the basic Figma model).



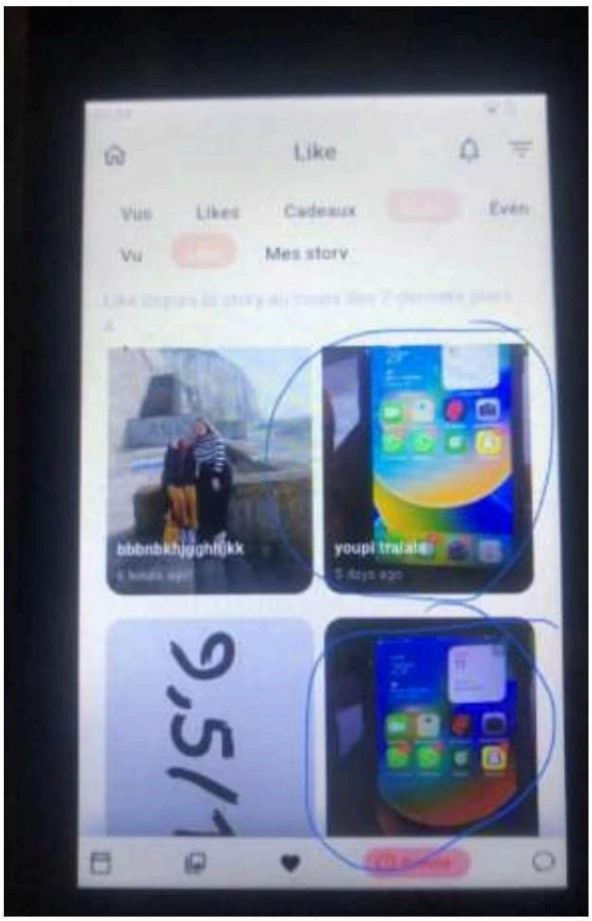
☐ When you click, it should display a message and a link to a premium account.



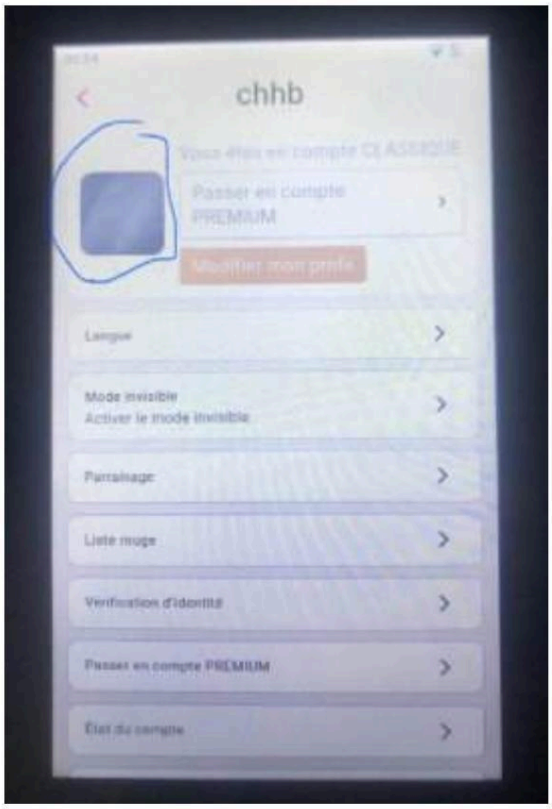
☐ If I click on the profile icon, it should open the profile details (everywhere).



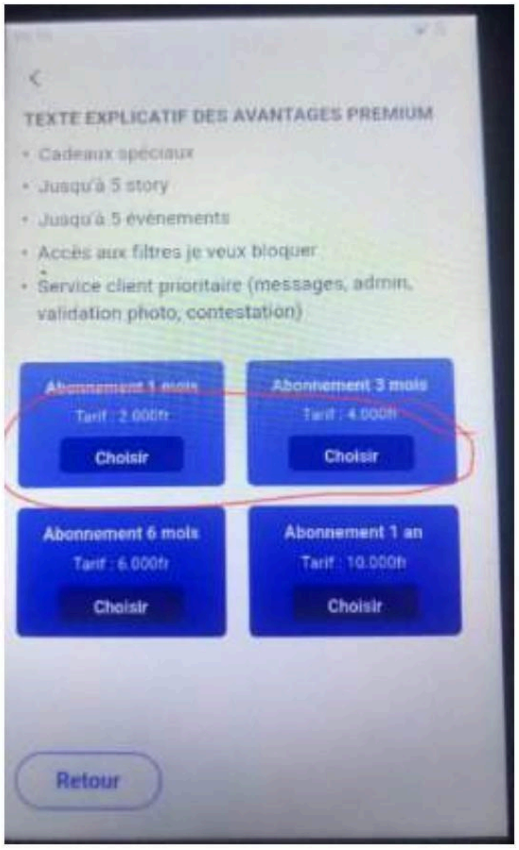
- [ ] The distance indicator for me doesn't seem to be working



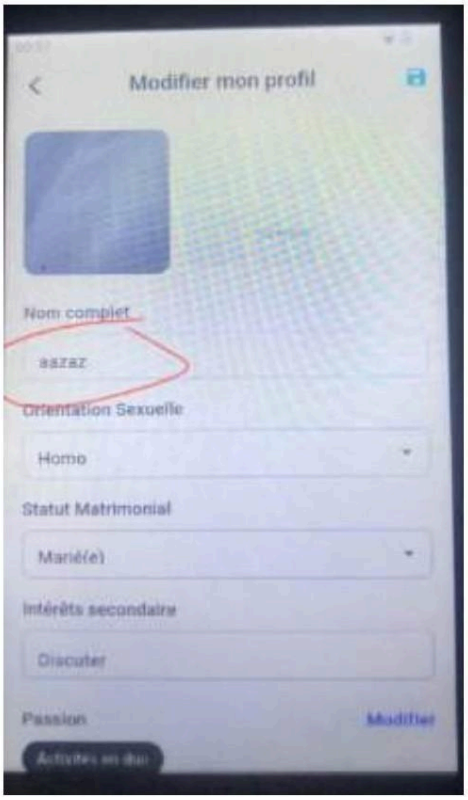
- [ ] The same profile should not be found twice; if a profile is disliked and reliked, it appears higher in the list (this applies to each activity and messaging section).their profile



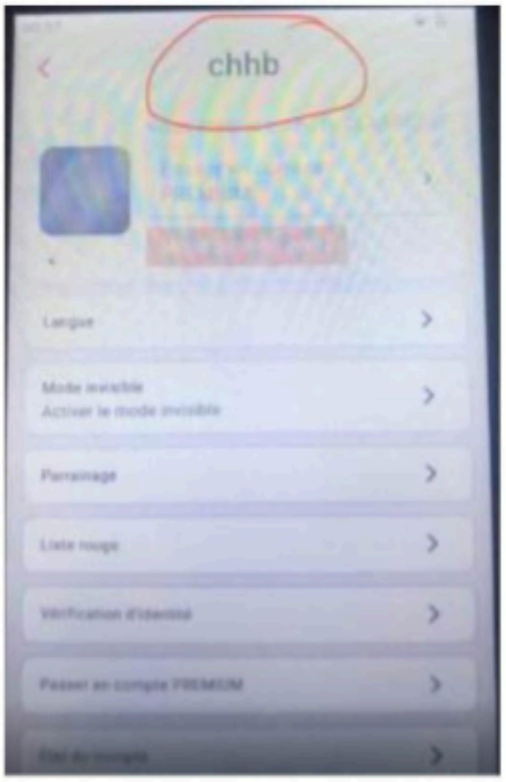
☐ If I click on the profile icon, it should open the profile details (everywhere).



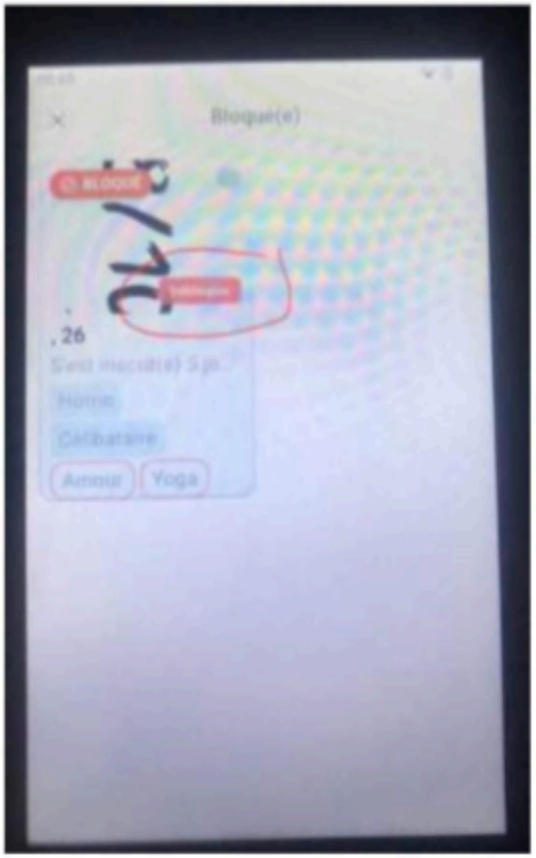
☐ The buttons don't seem to work.



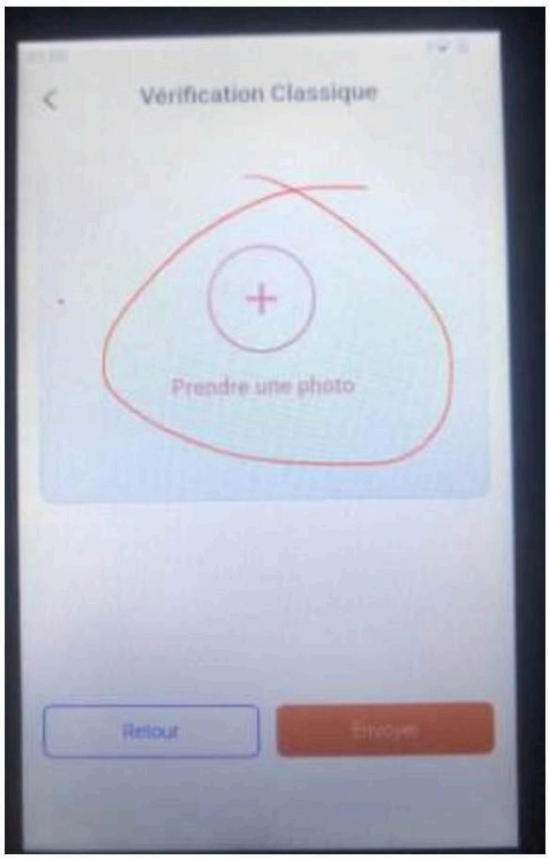
☐ The changes to my profile don't seem to be saving.



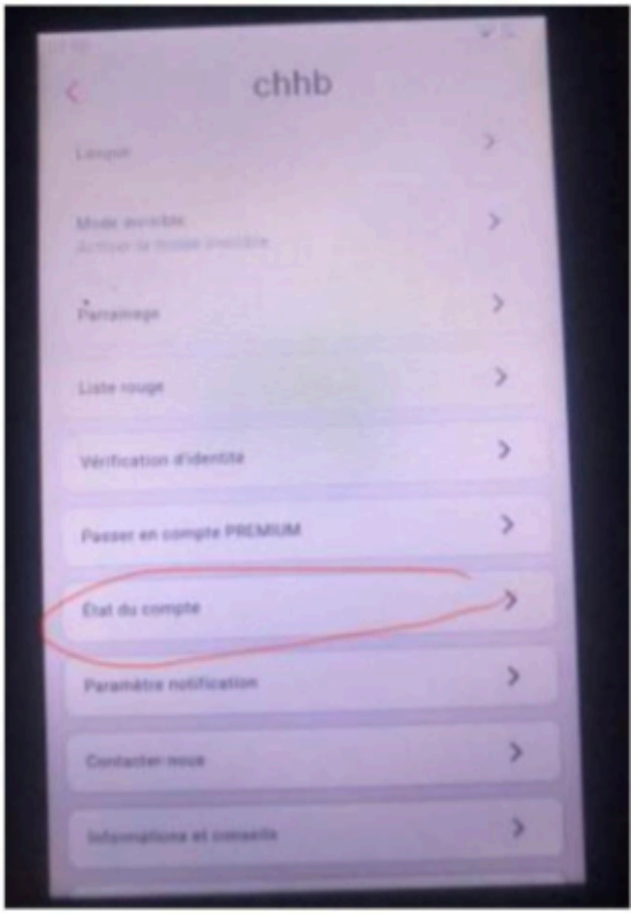
The changes to my profile don't seem to be saving.



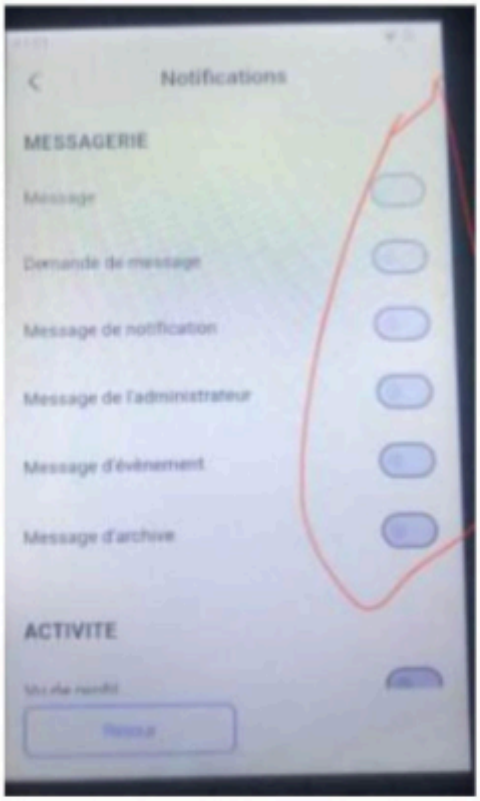
☐ The unblock button in the red list doesn't seem to work.



- [ ] The add button doesn't seem to be working.



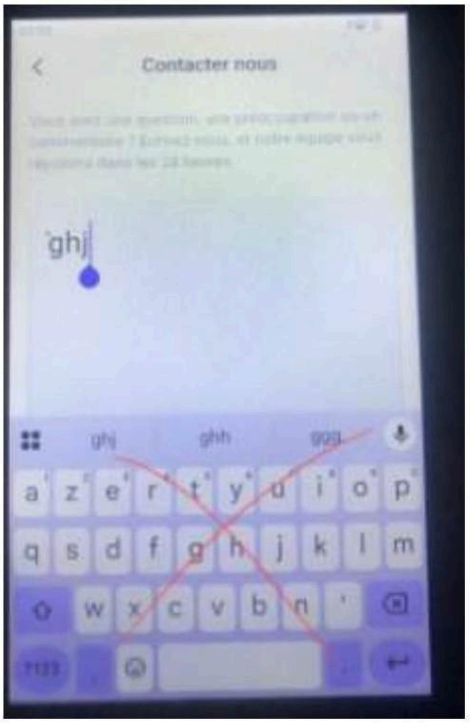
This section does not appear to be working



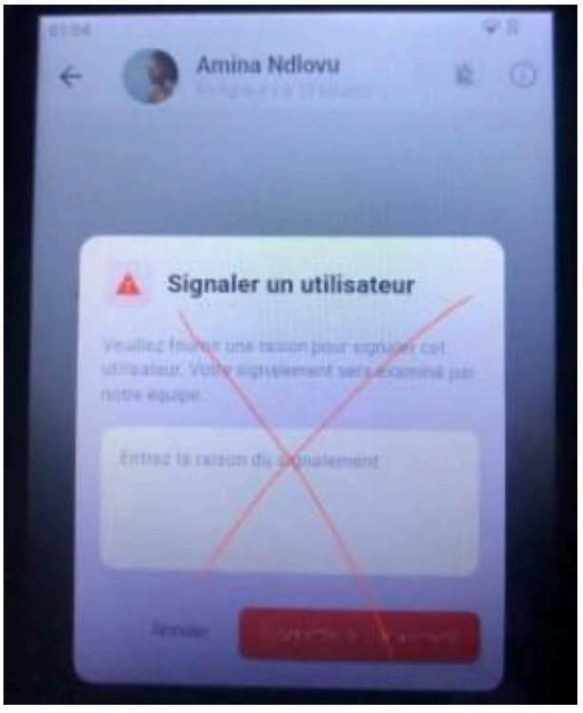
☐ No notifications seem to be working.

Changes to notification settings are not

saved



☐ There should be a way to make the keyboard disappear (by clicking elsewhere).



- [ ] The same format must be used for reporting everywhere.

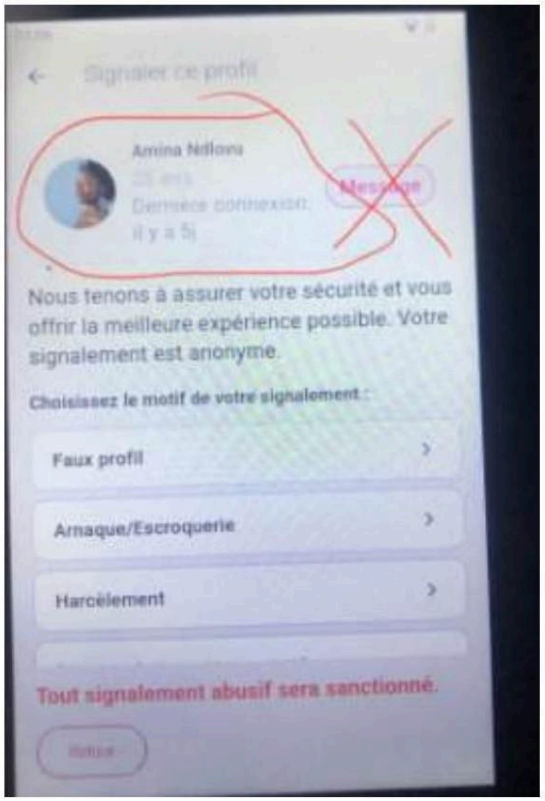
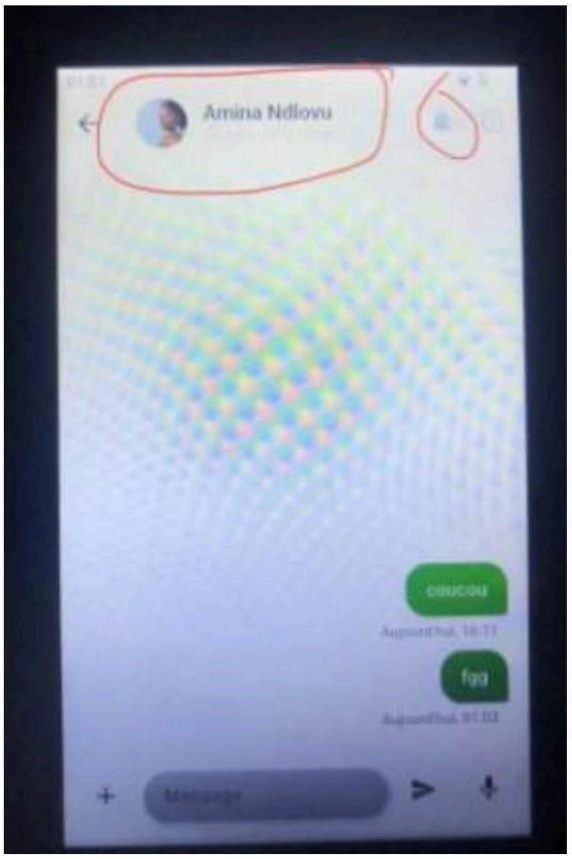
☐ That

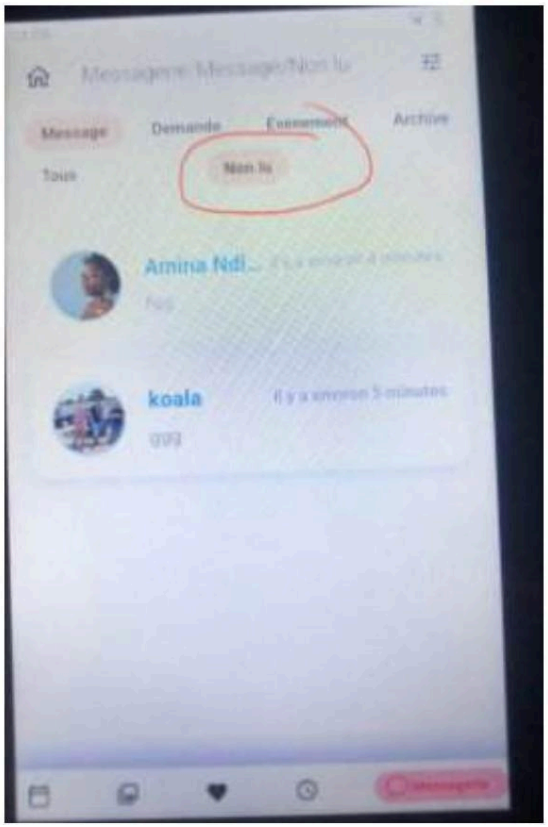


- [ ] Everywhere, if you click on the profile icon, it opens the profile details. The message button needs to be removed

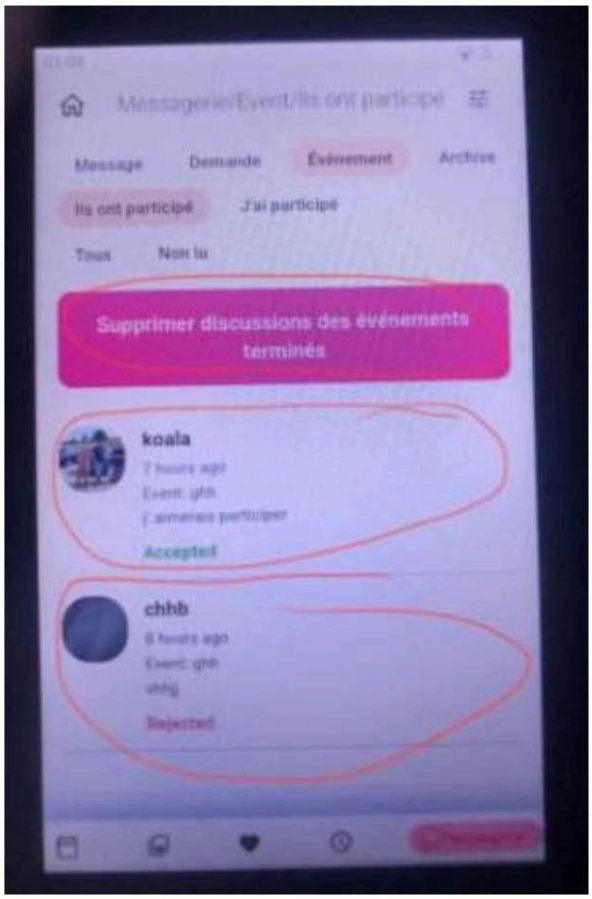


- [ ] The bell on the right isn't working; it should be the lock button, please.

  Everywhere, if you click on the profile icon, it opens the profile details.



- [ ] Only unread items should appear in the "unread" section. The others are visible in all



- [ ] In messaging, these are discussions

- [ ] The request to participate in an event arrives in the activity log; if accepted, it creates a discussion in the event messaging system.

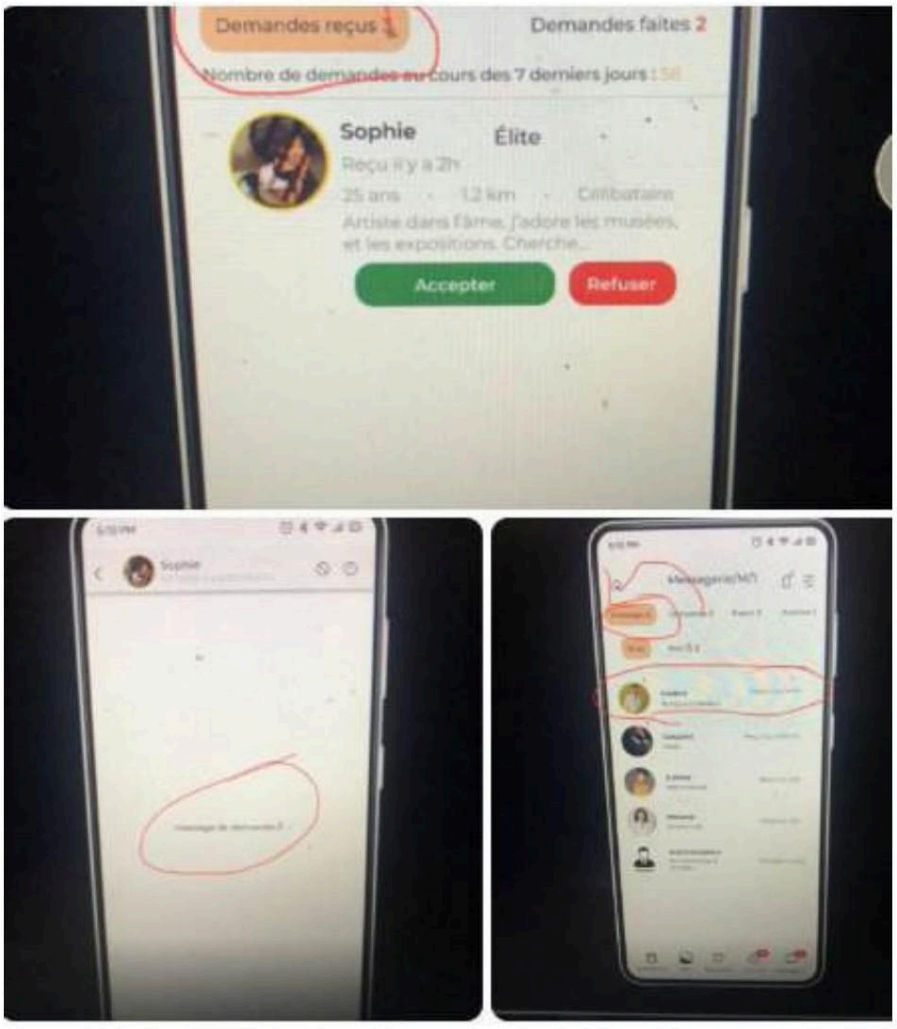
REFUSÉ

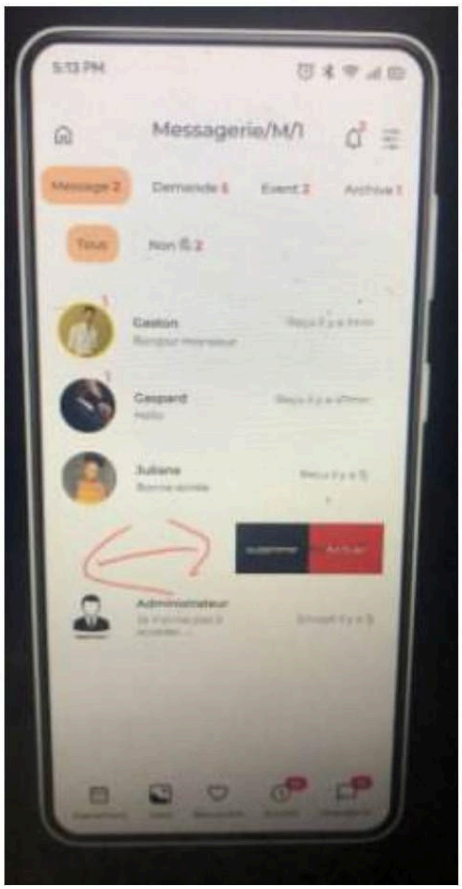
- [ ] In deman, If I refuse, the request disappears.
- [ ] Currently, if I refuse, it's as if the sender has cancelled.



- [ ] If I accept a message request, the request disappears and a new conversation is created (in the message).
- [ ] This discussion contains the message of request,

- [ ] Clicking on the profile icon opens the profile details Clicking on the message opens the discussion

- [ ] Clicking on the profile icon opens the profile details (everywhere).
- [ ] Clicking on "view event" opens the details of the event in question.



- [ ] Discussions need to be archived or deleted.

- [ ] The "delete completed events" button doesn't seem to work and doesn't seem to include events whose date has passed (completed).

- [ ] If a request is refused, the (message) button on the profile that refused the request becomes locked; if the user tries to send a second request, an informational message appears (a request has already been refused; you can no longer contact this user).

- [ ] In my story, if I publish a story, it's not immediately visible; I have to switch categories and go back to my story for it to update.

- [ ] It seems to be the same for a refused request (however, it's immediate for an accepted request, but it should disappear and create a discussion rather than remaining accepted in the request).

- [ ] Wherever there's an option to add photos (profile, story, event), there should be an option to take a photo directly from the camera, in addition to the option to upload a photo or image.
